

We Use Math to try to Find the Best Products for You

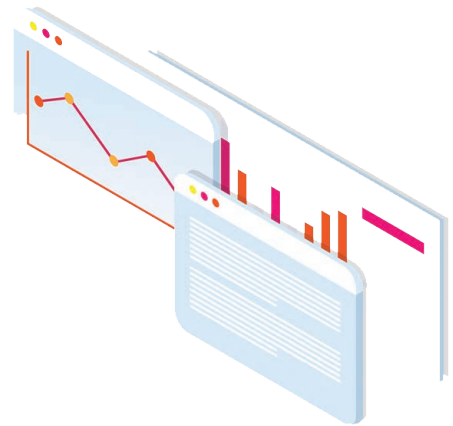

As a part of a balanced financial plan, insurance products may be recommended to mitigate certain risks. As an independent advisor, I have access to hundreds of insurance products. If an insurance product is right for your situation, I work with a firm that employs actuaries on our team.

Nothing is foolproof, but applying actuarial techniques to retirement and annuity designs can provide an extra layer of scrutiny and consideration, and widen the scope to review your clients' options. We apply this approach to every case we handle.

Independent, Unbiased Guidance.

At Core, we're not selling you a product, we're designing a solution for your client. This allows us the freedom to impartially search and analyze product offerings available from more than 30 different carriers on your behalf and no one else's.
